## Notes

This set of call changes uses the treble as a hunt bell and the two as half-hunt (changes shown in blue).

This means that the treble is called from front to back, at which point the two is called up one place, and then the treble called back to the front whereupon the two is called up another place. This continues until the two reaches the back when the next bell, the three, is called up one place (red).

The treble and second continue with their hunt and half-hunt path until the second gets back down to the front at which point the three is called up another place, etc., etc. Once the three reaches the back (in front of the six in this case, see next paragraph) the next non-hunt bell is treated in the same way.

In order to shorten the length to 500 changes the sixth is not included in this procession of the non-hunt bells but remains at the back in front of the tenor (cover) other than when it is disturbed by the hunt and half-hunt.

The changes at the beginning (green) put the bells into short queens and at the end bring them back into rounds whilst ensuring that the whole peal is true and does not repeat. It is important that the final few changes are called in the order shown or the piece will be false.
